

LegalView Blog Notifies Readers of a New Experimental

Saturday, 02 February 2008

Readers of LegalView's mesothelioma blog recently alerted readers of an experimental asbestos removal trial that is being used as an allegedly cheaper and safer method. LegalView provides information on asbestos removal as well as treatments and jury verdicts.

LegalView provides readers with up-to-date news on experimental asbestos removal method will begin to be used in populated areas of the United States. The method, known as the Alternative Asbestos Control Method, uses a mixture of treated water that is sprayed onto buildings. The buildings are then demolished without removing the asbestos. The U.S. Environmental Protection Agency (EPA) is condoning the method even though many individuals have raised concerns about asbestos dust being released into the air. The EPA began testing the method in 2007 at a private facility in Arkansas. Asbestos is composed of minerals and was heavily used in recent decades in the construction of homes, schools and government facilities among many other structures. It was found that breathing in asbestos fibers and asbestos dust can, over time, cause an incurable form of cancer known as mesothelioma. Individuals who feel they may have been previously exposed to asbestos should contact an experienced mesothelioma law firm . Mesothelioma can take years to develop and most often is misdiagnosed. Access LegalView's mesothelioma information portal to learn more about symptoms and side effects as well as mesothelioma treatments . Also use the site to find resources on mesothelioma doctors and other experimental studies. The EPA's experimental removal method is being touted as less costly and safer than other methods but the Public Interest group is questioning these claims. To learn more about asbestos or other legal topics, visit www.LegalView.com/. LegalView provides an endless array of resources for a variety of legal issues causing millions of Americans grief, time and money. To learn more about receiving an attorney consultation on a legal topic such as Nephrogenic Systemic Fibrosis (NSF) visit LegalView's NSF information portal. NSF is a rare and incurable illness that causes thickening and hardening of a patient's skin. Eventually, an individual diagnosed with NSF is unable to utilize their appendages or limbs because of the skin becoming to thick and hard around the joints of the body. Other issues that LegalView provides resources for include traumatic brain injury accidents and auto accidents. Millions of Americans are affected tragically because that individual, a family member or friend has been injured in either accident. LegalView enables readers to find a brain injury lawyer or auto accident attorney in their area through its information portals. About LegalView: LegalView.com is a public service brought to you by Legal WebTV Network, LLC, a Limited Liability Corporation created by a group of the nation's most highly respected law firms: Anapol Schwartz; Brent Coon and Associates; Burg Simpson; Cohen, Placitella and Roth; James F. Humphreys and Associates; Lopez McHugh; and Thornton and Naumes. For more information on the accomplishments and track records of LegalView.com's superior sponsoring law firms and to get in touch with LegalView attorneys, visit LegalView at www.LegalView.com .
